Content

Executive Summary	13
I. Introduction: The right to water – everybody wants it but do we really know what it means or how we get it?	23
II. Substantiating the content of a right to water:	
Where are we?	31
1. Content analysis of demands in international declarations	32
2. Milestones in the rtw debate	39
a) The problem of access should be at the centre of the debate, not quantity	39
b) Specification of access is a gradual, not a binary problem	40
c) Specification of access is a multi-dimensional problem .	41
d) Reasonableness of burden and non-discrimination as established criteria for access	44
3. Remaining shortcomings and avenues for further progress ...	44
a) No link between competing sustainability objectives and access	44
b) Insufficiency of only two criteria: the missing functionality of barriers to access	45
c) No precise assessment of different supply situations	45
d) Interdependencies between the four access dimensions are not sufficiently integrated	46
4. Avenues for conceptual improvement	46
a) Making the hurdles of access the proper object of investigation	46

b)	Recognising (sustainability) functions of hurdles to access	47
c)	Time is the main “currency” for non-pecuniary hurdles	48
III.	Assessing interdependent hurdles of access: A new conceptual foundation for substantiating the right to water ..	51
1.	Hurdles to access and their functionality	51
2.	Normative requirements for hurdles in the context of rtw	56
3.	The interaction of the three normative criteria	62
4.	A special focus on the interaction of functionality and reasonableness	66
IV.	Implementing a right to water through “sustainable access”: Insights from Institutional Economics	73
1.	Introduction	73
2.	A contractual perspective: the supply agreement as an economic “contract”	74
3.	The access level and the importance of the competing goals	79
4.	Beyond water supply networks: the problem of access on heterogeneous water markets	82
V.	Thought experiment: Water free of charge	87
VI.	Applying “sustainable access” to water: What we gain in current water policy debates	93
1.	Debate on privatisation	93
2.	Debate on pricing water and affordability	94
3.	Analysis of water markets with different types of water provision	95
VII.	Conclusions and outlook	97
